

Sun and Weather

Date: **7-8-24**  
Photo Time: **4:00 pm**

Visibility:  
Good  Poor

Air Quality: **Good**

Sun Azimuth (degrees): **260.84**

Sun Angle (degrees): **55.49**

Lighting Angle on Project: **Front**

Wind: **15 mph**

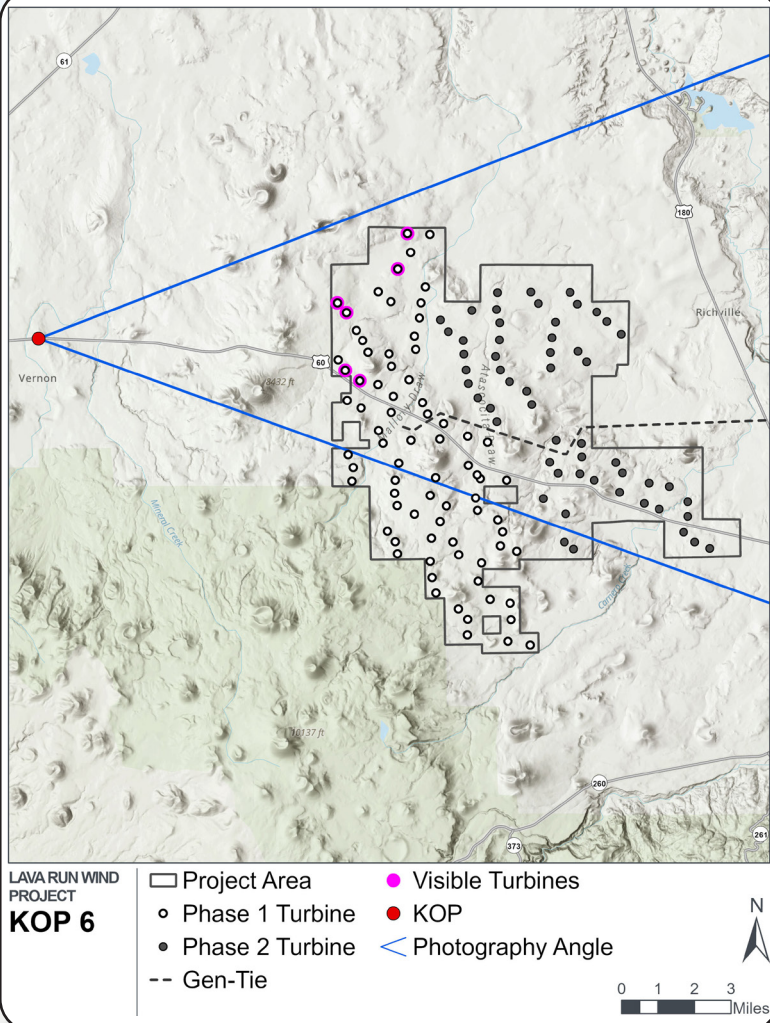

Cloud Cover: **20 %**

Temperature ( °F): **90° F**

Turbines facing 247.5 degrees west-southwest

Simulation was prepared using information provided by client, "LRW\_10% Design for Survey Corridors\_20241018" dated October 24, 2024. Locations, colors, and heights may vary based on final engineering and design.

Lava Run Wind Energy Project

KOP Location and Visible Elements

Visual simulations developed using the tallest turbine under consideration (654 feet). Simulations include 132 total turbines (112 primary locations and 20 alternate locations). This presents more turbines than proposed for installation and allows for review of visual impact of all possible turbine locations.

Structure Diagram

KOP 6 - Vernon at US 60

Base Photographic Documentation

Latitude, Longitude (degrees): **34.272139, -109.692488**  
Viewpoint Elevation (feet): **6,880**  
Camera Height (meters): **1.5**  
Camera Heading (degrees): **90**  
Camera Make & Model: **Canon EOS 5D Mark IV**  
Camera Sensor Size (mm): **36 x 24 Full Frame**  
Lens Make & Model: **AF-P Nikkor**  
Lens Focal Length (mm): **50**  
Image Size (pixels): **6720 x 4480**

Approximate Distance to Nearest Turbine in Simulation: **8.2 miles**

Number of Turbines Visible in Simulation: **6**

Approximate Distance to Nearest Gen-Tie in Simulation: **Gen-Tie is not visible in simulation**

Viewing Instructions: Printed at 100% the resulting simulation is 16 inches wide by 10 inches high. At this size and focal length, the simulation should be viewed at arms length (24 inches). If viewed on a computer monitor, scale should be 100%.

**KOP 6: View from Vernon at US 60 looking east - Existing Condition**

**KOP 6: View from Vernon at US 60 looking east - Simulated Condition**

This image illustrates the turbines in color to highlight the modeled turbine locations that may otherwise be difficult to discern in the simulated conditions.
